(11) Fact Verification with Rag

(V1) Exploring Fact Verification with Rag →

→ Rag is used to improve llm-generated responses.

→ Sentence-transformers →

→ It is a python framework for sentence and text embedding using transformers models.

→ It can be used for tasks such as semantic similarity, clustering, classification and information retrieval for generating embedding for text data

→ Transformers →

→ Transformer is a library by hugging face that provide state of the art general purpose architectures for nlp text generation.

→ It includes implementing models like Bert, GPT, etc.

→ model used → "paraphrase-minilm-L6-v2"

→ This model maps sentences & paragraph to 384 dense vector space

→ And can be used for semantic search and clustering.
